WHAT IF consists of models of varying complexity, suited to the problem needs of the manager rather than imposing a one model fits all needs restriction. In this manner, the toolset is question driven as opposed to model-focused. WHAT IF is stream-based, permitting users to evaluate streams of interest for outcomes of management approaches and specific restoration actions. Habitat quality and aquatic ecosystem response models have been linked to a regional hydrologic model that simulates habitat characteristics (e. g. , water depth, current velocity and water temperature) that determine the survival, reproduction, and recruitment of fish and aquatic invertebrates. To facilitate the use and application of these models, graphical user interfaces (GUI), supporting databases, and libraries of management scenarios were developed. The Canaan Valley Institute (CVI) software toolset is a stream-based decision support tool that is object-oriented in design and easily maintained. Ultimately, what has been developed, using available data collected by the...
