Date :2003-9-1. This book is one graduate textbook series is based on stochastic process of learning engineering graduate student written request. The course content includes basic probability theory. the basic concepts of stochastic processes. stochastic analysis. stationary processes. Markov processes. queuing and service systems. the update process. time series analysis. martingale processes. Equipped with exercises after each chapter. Book is concise. easy to understand. who has a higher probability theory foundations of mathematics and engineering-based readers can read. This book can be used as engineering graduate and senior undergraduate students in teaching or teaching reference books. but also as a science and engineering students and engineers reference book. Contents: Chapter 1. the probability space of probability theory-based 1.1 1.2 1.3 random variables distributed random variables and the number of features characteristic function of random variables 1.4 1.5 n-dimensional normal random variable conditions of mathematical expectation of 1.6 1.7 Convergence of random variables exercises a first Chapter 2 the basic concepts of stochastic processes defined random process 2.1 2.2 Classification of stochastic processes and random process for example 2.3 the finite-dimensional distribution function of the number of family characteristics of random processes 2.4 2.5 the joint distribution of two random processes and digital characteristics of complex random process 2.7 2.6 several important class of stochastic processes in Chapter 3 Problem 2 the mean square limit of stochastic analysis 3.1 3.2 3.3 mean square mean square successive derivatives of the mean square integral 3.4 3.5 3.6 mean square stochastic differential equation analysis of the normal process of random Ito 3.7 Ito stochastic integral and stochastic differential Exercise three equations stationary process in Chapter...
