Reviews

A top quality publication along with the typeface applied was exciting to read through. It can be rally interesting throgh reading through time. Your life period will be enhance once you full reading this article book.

(Prof. Demond McClure)

BIBLIOTHECA SACRA SEU SYLLABUS OMNIUM FERME SACRAE SCRIPTURAE EDITIONUM AC VERSIONUM SECUNDUM FERIEM LINGUARUM QUIBUS VULGATAE SUNT, NOTICIS HISTORICIS ET CRITICIS ILLUSTRATUS . (2)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 272 pages. Original publisher: Silver Spring, Md. : U. S. Dept. of Commerce, National Oceanic and Atmospheric Administration, National Ocean Service, National Marine Sanctuary Program, 2008 OCLC Number: (OCoLC)244567731 Subject: Marine resources -- Florida -- Florida Keys National Marine Sanctuary -- Management -- Congresses. Excerpt: . . . MPA managers, accustomed only to addressing direct and usual threats related to fishing and tourism, for example, find it difficult enough to address the impacts of coastal development and inland activities, and may consider climatic sources of environmental stress totally beyond their sphere of influence. This perception is reinforced when even well managed reefs in the remotest MPAs succumb to a climate related bleaching event. However, there are some direct actions that MPA managers can take immediately, even as the scientific understanding improves. It might be possible to mitigate the negative impacts of bleaching on coral reef biodiversity in two broad ways: 1. Identify and protect from direct anthropogenic impacts, specific patches of reef where local conditions are highly favorable for survival generally, and that also may be at reduced risk of temperature-related bleaching and mortality Locate such protected sites in places that maximize their potential contribution to the 2. recovery of damaged or vulnerable reefs that are connected through larval dispersal The Nature Conservancy has developed a Resilience Model to assist conservation planners and managers build resilience into coral reef MPAs. The most effective configuration would be a network of highly protected areas nested within a broader management framework. Such a framework might include a vast multiple-use reserve managed for sustainable fisheries as well as protection of biodiversity. The ideal MPA system would be integrated with coastal management regimes to enable effective control of threats originating upstream, and to...
